1 8   (Amended) The method of claim [7] 6 further comprising configuring a

2 [second node of said computer system] listener client to receive said isochronous data

3 from said linked list of buffers.

1 10.   (Amended) The method of claim 9 [further comprising adding a sender client to

2 said isochronous channel,] wherein said sender client [being] is a software driver

3 routine associated with a sender node of said computer system, the method further

4 comprising [by] providing said sender client with said channel identifier.

1 12.   (Amended) The method of claim 10 further comprising adding said sender

2 client as a further listener client.

1 17.   (Amended) [The apparatus of claim 16 further comprising] An apparatus,

2 comprising an isochronous data path including a linked list of buffers configured to

3 receive isochronous data transmitted over said data path; and

4 a sender node configured to transmit said isochronous data coupled to said data

5 path.

1 21.   (Amended) [The sequence of computer-readable instructions embodied on a

2 computer-readable medium of claim 20 further comprising instructions arranged] A

3 sequence of computer-readable instructions embodied on a computer-readable medium

4 comprising instructions arranged to cause a processor to configure an isochronous

5 channel within a computer system including said processor to include a linked list of

6 buffers configured to receive isochronous data transmitted within said computer system

7 and to cause said processor to add a sender client to said isochronous channel.
